CIRCUIT BOARD INSTALLATION

CAUTION: Make certain stove is not connected to a power outlet

Step 1: Locate the control panel which is in a box inside the stove.

Step 2: After attaching the flashing (see owner's manual for instruction) Pass the Molex plug connector at the end of the wire harness through the left side flashing and reconnect to the control panel connector. **Note:** Take care as it can only fit one way.

Step 3: Attach control panel to flashing. Use the 4 screws provided.

CAUTION: Make sure there is clearance between wire harness and blower fan.

CAUTION: REMOVE FOAM INSULATION FROM BENEATH THE BLOWERS, PRIOR TO USE. DO NOT LEAVE THEM WITHIN STOVE!
