

# MODEL MARK I

**LINCOLN FIRE•MATIC MARK I** is a wood only solid fuel appliance designed for the smaller house, cabin or workshop. As with all Lincoln's the quality and professional design is displayed from the appearance to internal parts not seen by your eyes.

### REASONS WHY THE LINCOLN MARK I SHOULD BE HEATING YOUR HOME:

- Heavy 16 gauge steel cabinet with high quality baked enamel finish fastened together with screws for a positive air seal.
- Heavy foil lined insulation spotwelded into place on the interior of the cabinet preventing it from coming loose while the 525 CFM blower circulates the air through your house.
- Firebox lined with firebrick and heavy cast iron wood grates.
- Large adjustable cast iron door with spin draft control and positive lock.
- Built in air filter system which filters the air being circulated through the house.

**LINCOLN REPRESENTS OUTSTANDING QUALITY WITH REALISTIC PRICES!**

# MODEL MARK IV

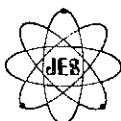

**LINCOLN FIRE•MATIC MODEL MARK IV:** A wood only solid fuel appliance designed for the larger houses or workshops. Carefully designed and manufactured with quality, this model and all other **LINCOLN's** are built as though we are going to put one in our own house to provide our families heating comfort and safety during those long cold winters.

### YOU NEED A LINCOLN MARK IV, Because:

- Heavy 7 gauge firebox with continuous weld seam for safety and quality
- Large firebrick lined firebox with heavy cast iron grates
- Built in Humidifier to help ease the dryness from wood heat
- A 2 speed 1200/1500 CFM blower to circulate the air
- Heavy 16 gauge steel outer cabinet fully insulated to keep the heat flowing throughout your house.
- Optional forced air draft kit which allows you to control the fire from your living room and keep even temperatures throughout the house

**LINCOLN: A NAME THE NATION TRUSTS .....**

### \*DISCLAIMER NOTICE

The BTU ranges and heating capacity specification are provided as guidelines only and in no way guarantee the output or capacity of the units. The actual BTU output depends on the type of fuel burned and its condition, the thermostat setting, the draft adjustments and the chimney that the unit is hooked up to. The actual area that the units will heat depend on factors such as the condition of the building, heat loss, type of construction, amount of insulation, type of air movement and the location of the unit. We reserve the right to change the appearance and specifications as we constantly work to build a better, more efficient wood/coal burning solid fuel appliance.
